

MRISB 4-STEP LESSON DESIGN | UbD × ETEC

OUTCOME → PROOF → PREPARE → RESPOND → REFLECT Plan the learning first; let the checklist follow. Click a field to type • click a box to tick it.

Teacher	Subject	Grade / Section	Date / Period	Unit / Topic
Mr. Ashraf Elbialy	Computer Studies (DigiChamps L10)	Grade 10 - Classes 10/1 to 10/6	Wk 12 (22-26 Nov 2026) - Period 1	Unit 4 - 4.2 Core Logic of the Game (1/2)
Pacing (2-1-1-2): ☒ On plan ☐ Ahead ☐ Behind Weeks ahead / behind: 0 Week / lesson: Week 12 / Lesson 1 of 2		Starting point (2-2-1-3): What did my last check (quiz, exit ticket, homework) show — and what am I changing today because of it? Countdowns working for ~80%; ms conversion now secure. Today: start the game, make worms pop out at random times in random holes.		

1 OUTCOMES — What must students learn?

Desired learning outcome(s) — trace to the curriculum / standard and the table of specifications (ToS)

Students build core game logic: start the game, make worms pop out, set random times (Math.random range formula) and choose random holes. Sprint 4.2 obj. 1-4; CSTA 3A-AP-16; Activity 1.

Success criteria — what will successful learning look / sound like?

I start the game on a button click; I generate a random time between min and max; I choose a random hole; worms pop out repeatedly.

Key knowledge / skill / understanding:

Math.random() gives 0 to <1; min + rand*(max-min); Math.floor for whole numbers; array of holes.

Likely misconception / access or challenge need:

Math.random gives whole numbers; same worm can't appear twice in the same hole.

2 PROOF — What will students do to show they have learned it? Three activities, each with a DIFFERENT strategy, resource and evidence tool. Then tick the Coverage Check on page 2.

ACTIVITY 1 student task + evidence of learning	ACTIVITY 2 student task + evidence of learning	ACTIVITY 3 student task + evidence of learning
Strategy: Problem solving ☒ Time: 8 min	Strategy: Modelling / worked exam ☒ Time: 22 min	Strategy: Debate ☒ Time: 7 min
What students will do: Activity 1: calculate a random time between 2000 and 3000 ms for rand = 0.83 by hand, then verify in Chrome's Console.	What students will do: Code along: startGame(), randomTime(), randomHole() and popOut() using setTimeout; worms appear in random holes until the game ends.	What students will do: Is a game fair if it is random? Teams argue for/against using real examples (dice, sports draws) and suggest how to make randomness feel fair.
Evidence tool: Mini-whiteboards ☒ Assessment: ☒ Diagnostic ☐ Formative ☐ End Grouping: ☒ Individual ☐ Pair ☐ Group	Evidence tool: Practical / performance task ☒ Assessment: ☐ Diagnostic ☒ Formative ☐ End Grouping: ☒ Individual ☐ Pair ☐ Group	Evidence tool: Oral questioning ☒ Assessment: ☐ Diagnostic ☒ Formative ☐ End Grouping: ☐ Individual ☐ Pair ☒ Group
Resources: Chrome Console; formula slide.	Resources: VS Code; project source 'Core logic'; student book 4.2.	Resources: Debate prompt; examples.
Support (low performers / SEN): Calculator; worked example with 0.5.	Support (low performers / SEN): Code skeleton with functions named; pair programming.	Support (low performers / SEN): Sentence starters.
Stretch (fast learners / gifted): Write a function randomBetween(min,max) and test 5 values.	Stretch (fast learners / gifted): Prevent the same hole twice in a row (compare with lastHole).	Stretch (fast learners / gifted): Link to probability: chance of the same hole twice with 9 holes.

3 PREPARE — What do I need to do so students can succeed?	4 RESPOND — What will I do with what I see and hear?
Set students up to succeed: ☒ Hook / prior learning ☒ Explain or model ☒ Success criteria shared ☒ Key vocabulary / examples ☒ Real-life connection ☒ Clear instructions / resources ☒ Praise, recognition and reinforcement planned	If students struggle or finish early I will: ☒ Re-teach ☒ Regroup ☒ Give extra support ☒ Stretch ☒ Have students redo / improve
My setup / modelling: Time: 6 min Hook: roll a dice - how can a computer 'roll'? Model Math.random, the range formula, Math.floor with an array of holes. Show the flow: start -> random hole -> pop out -> hide -> repeat. Share success criteria.	What I will watch for / likely responses: Using Math.round giving index 9 (out of range); setTimeout not called again; CSS class for 'up' worm missing. Likely: 'worms appear all at once'.
What is new or innovative in this lesson? <i>(ETEC looks for this)</i> Numeracy and probability embedded in coding; students debate fairness of randomness, linking maths to game design ethics.	Close / exit check <i>(summative + time for learners' questions)</i> Time: 7 min Exit ticket: compute min + 0.25*(max-min) for 1000-4000; why Math.floor not Math.round? Learners' questions.
Progress recorded / shared: ☒ Gradebook ☐ Parents ☐ Written feedback in notebook / portfolio	Homework / platform <i>(e.g. Madrasati)</i> Madrasati: finish pop-out logic; upload a 20-second screen recording or screenshot. Optional: Challenge 3 Start/Stop random colour.

5 REFLECT — After the lesson <i>Complete within a day. This is reflective-practice evidence and feeds your next Starting point.</i>		
What worked — and how do I know? Calculating by hand first made the code make sense; probability debate engaged quieter maths-strong students. 75% had worms popping by the end.	What will I change next time? Show the off-by-one error deliberately next time. Give a skeleton to all students to save typing time.	Students needing follow-up: Students whose worms don't hide (CSS class issue) - approx. 3 per class; peer mentors assigned for next lesson.

COVERAGE CHECK <i>Tick where each must-have happens (1 · 2 · 3 = activity, C = close, H = homework). An empty box is a gap to fix before teaching. Literacy and numeracy apply in every subject.</i>
